# Cryonite®

## – a safe proven concept

Cryonite® is an environmentally friendly and patented technology that makes use of liquid carbon dioxide to freeze insects to death. The patented nozzle ejects a carbon dioxide snow of optimum particle size and speed that quickly eliminates insects. The technology has been well tried and tested. The method is already used in many parts of the world combating crawling insects.

The Cryonite® system consists of a unique, patented nozzle, which connects to a carbon dioxide cylinder with a long flexible hose. The lance is extendable to permit good accessibility and ensures outstanding results even in difficult-to-reach areas. Cryonite® is easy to use, with minimal personal protection required. The absence of pesticides and residues means that treatment can take place with no downtime in production or evacuating of staff.

# Cryonite®

## – fast and efficient

As society surrounds itself with increasingly technical and electrical gadgets, pests will always find new places to invade. But it is dangerous to handle electrical appliances. With Cryonite® there is no need to shut down the entire building to manage a small wall socket or electrical contact point in a single room. Treating pests with Cryonite® is a safe solution.

### Ready to use – everywhere

Cryonite® is a 100% organic method that does not leave residues. This minimizes production downtime, which reduces costs. For example, in the dry food industry with extensive crawling insect problems and in hotels for combating the rising problem of bed bugs.

### A perfect IPM tool

Cryonite® can be used alone, but is also a perfect complement to other treatments. It can become a regular part of hygiene routines, and contribute to maintaining an insect-free environment. Just freeze with Cryonite® – it is a simple way to eliminate insects.

## Just Freeze – with Cryonite®

Killing insects by freezing is a well-documented method. A fast temperature drop increases the efficiency. The patented Cryonite® solution is manufactured from the finest material, and can be supplemented with spare parts if necessary. The system comes with instructional video and manual. The concept includes a complete equipment (except the carbon dioxide gas cylinder).

Bed bug

German cockroach

Mediterranean flour moth

Destructive flour beetle

Saw-toothed grain beetle

Cacao moth

Wasp

House-spider
