

About Silandersson

Silandersson Sweden AB is the world leader in environmentally friendly and non-toxic insect and pest control. The company was founded in 1982 by Åke Silandersson. Cooperation with the food provision industry and the FOA (Försvarets Forskningsanstalt – Swedish National Defence Research Establishment) led to the first unique product, based on a special adhesive. The first product has since seen a number of follow-up products, customised to particular needs and the various environments where they are intended for use. The market is currently in a phase of strong growth, and there has been ever greater demand for our products.

A company living up to the times

Rapid innovation, high product quality, high delivery reliability and a keen sense for the needs and wishes of our customers – all greatly contribute to our leading market position. More than 90 % of Silandersson's production goes to export to over 47 countries. The company's most important customers are currently farmers, professional cultivators, industry and consumers with houses, gardens and stables. Silandersson is a leading supplier of professional pest control. Silvalure Agri Line is a product line especially developed for farming and has been adapted to meet the needs of milk producers.

Silandersson features the following product lines:

SILVALURE = Eco-friendly insect and pest control.

All our products are designed to be as effective as possible while having the least possible impact on our environment.

Non-toxic and environmentally friendly fly traps for stables and milking rooms

It is important to maintain a healthy environment and hygiene in the stable – both for cows and for yourself as a worker there. Flies and insects cause irritation and discomfort. Apart from that, flies are also notorious spreaders of disease. Longer wound-healing times and complications for injuries also result from such pests.

That's why Silvalure has created a fly control assortment especially designed for you, the worker, who milks cows and in animal stalls in general. The product line is called Agri Line and makes your cows feel better and produce more.

Agri Line – better environment in your cow stall

Fly Control Agri Line consists of eight products. All eight are based upon a unique adhesive system and four of them have a special, patented 3D model. The product design is adapted such that it effectively attracts and captures flies and other insects, thus providing both you and your milking cows with a better stable environment.

Silvalure® System – the best adhesive system

Silvalure® System is the market's most effective, functional and proven adhesive system. The paper and adhesive have been adapted to the insect type, temperature, durability, UV light, dampness, storage, etc. This is to ensure you a perfect product and a fly-free environment.

Fly Control – 24 hours a day

The Fly Control assortment consists of fly traps with long-working, non-toxic adhesives. The patented 3D model with fluorescent colours effectively attracts the flies. The products provide you with a solution for every need in your cow stalls or milking room. Quick changes in the weather and the greenhouse effect/global warming that is becoming more and more common are increasing the need for non-toxic pest control. Fly Control works 24 hours a day while other methods tend to have a shorter and decaying effect.

Set it up correctly for the best results

Flies are happiest in warm, sunny and poorly ventilated areas. Find out where flies like it best in the respective area – then mount the traps right there.

From 1 to 64 million

1 fly lays 400 eggs, which turn into 400 adult flies after just one month. In 3 months, you have the potential growth of 64 million adult flies.

So make sure you set out your traps in plenty of time!

1 – Fly Control String Complete

Effective and environmentally friendly fly string complete with an installation kit. The trap works all year round, 24 hours a day in the stable, milking room, barn, etc. Place the roll at ceiling height. When the string is full, replace it with the refill.

Contents: 500 m (1) • Art.no: 3212-1577 • EAN: 7313743212016

2 – Fly Control String Refill

Effective and environmentally friendly fly string in refill packaging for String Complete, above. It is delivered with adapters that can be used with other suppliers' holders.

Contents: 500 m (1) • Art.no: 3182-1575 • EAN: 7313743182012

3 – Fly Control Cattle Sheet

An effective, environmentally friendly and compostable fly paper for the stable, milking room, barn, etc. It can be hung from the ceiling, placed on walls or around different objects. It is extremely effective thanks to our patented 3D model and fluorescent colouring. It provides advantages throughout the entire year. Works effectively around the clock, 6-8 weeks or until the trap is full.

Contents: 8 sheets/package, 585 x 300 mm (10) • Art.no: 2326-632 • EAN: 7313742326011

4 – Fly Control Cattle Sleeve

An effective, environmentally friendly and compostable fly paper for the stable, milking room, barn, etc. Place around pipes or hang in a level position against the wall. It is extremely effective thanks to our patented 3D model and fluorescent colouring. It can be used year round. Cattle Sleeve works effectively around the clock, 6-8 weeks or until the trap is full.

Contents: 12 sheets/package, 110 x 300 mm (12) • Art.no: 2234-716 • EAN: 7313742234019

5 – Fly Control Roller

An effective, environmentally friendly and compostable fly paper on rolls for the stable and milking room. Tear off in small parts or draw out like a curtain, etc. The roller is extra effective due to the patented 3D pattern with fluorescent colours. It provides advantages throughout the entire year. Works effectively around the clock, 6-8 weeks or until the trap is full.

Contents: 0,1 x 6 m (12) • Art.no: 6015-384 • EAN: 7313746015010

6 – Fly Control RollerXL

An effective, environmentally friendly and compostable fly paper on rolls for the stable and milking room. Tear off in small parts or draw out like a curtain, etc. The extreme effectiveness of the Roller XL stems from a patented 3D pattern with fluorescent colours. It provides advantages throughout the entire year. Roller XL works effectively around the clock, 6-8 weeks or until the trap is full.

Contents: 0,3 x 9 m (15) • Art.no: 2264-852 • EAN: 7313742264016

7 – Insect Control UV-lamp

The UV lamp is an eco-friendly, effective, silent and hygienic fly and insect trap, perfect for stables, milking parlours, etc. Ultraviolet light attracts flying insects to the trap, where they get caught up in a special adhesive which can withstand heat and UV light. This product is IPX4-classified for wet rooms and damp environments. Use: Indoors and outdoors. Designed for 220-240V.

Contents: 1 complete lamp & 1 adhesive sheets (4) • Art.no: 6458-004 • EAN: 7313740000630

8 – Insect Control Glue board refill UV-lamp

Adhesive sheets in refill pack that fits the UV lamp 6458-004.

Contents: 3 adhesive sheets (5) • Art.no: 6463-1562 • EAN: 7313740000807
