A large illustration of a fly's head and wings, rendered in a stylized, translucent blue and yellow color scheme. The fly is positioned in the center of a large orange target with concentric circles. The background is a solid dark green.

Places glue **exactly**
where you want to

From one pro to another

Previously it has not been possible to produce glue boards with the glued areas in different shapes and forms and neither was it possible to place the glue wherever one desired. With the new *CoreDot™ Application Technology* there are no restrictions!

The technology has been developed to meet the high demands of the professional pest control business. Demands such as high quality and efficiency are at the top of the list, but also the demands for flexible and ease-of-use products have been the guiding principles for the development. This is why we are very proud to introduce the *CoreDot™ Application Technology*.

CoreDot™ places glue exactly where you want to

CoreDot™ – right on the spot

High precision

High flexibility

Great freedom of choice

CoreDot™ right on the spot

The CoreDot™ Application Technology is a high precision technology to apply the glue to the boards exactly where you want it – and only there. This enables many advantages.

High precision

Produces sharply defined glue edges with the glue-free as well as the glued surfaces exactly where you want them.

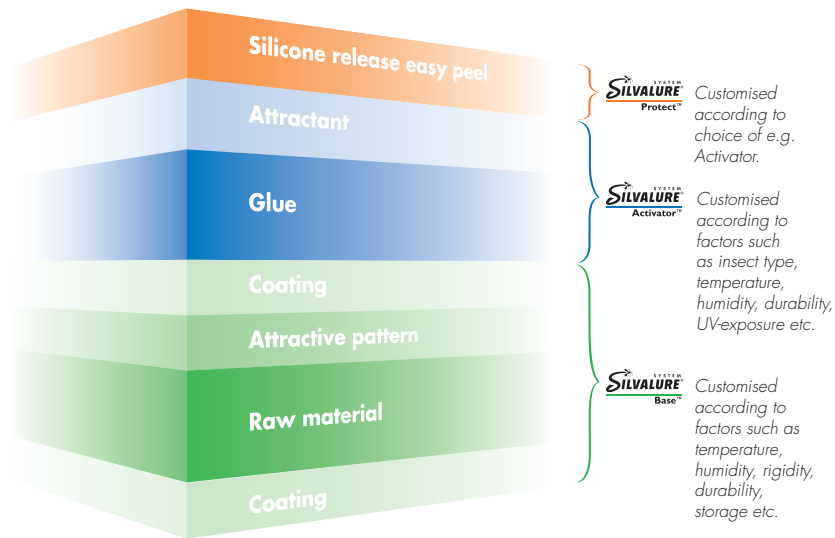

High flexibility

The glue boards may be customised and made exactly to your specifications and desires.

Great freedom of choice

CoreDot™ makes it possible to choose exactly the shapes and forms you desire for the glued areas, based on your product specifications, designs and functions.

Excellent innovation; perfect application

To apply the glue in exactly the right places does not of course solve all problems. The glue boards must also be designed to meet all requirements and needs. The glue boards must be easy to handle, the glue should not dry out. They must resist heat and UV-light, and be efficient. That's why the *Silvalure® System Glue Board* is built up like a sandwich, with three well-defined layers (see image) for maximum effect.

We at Silvanderrsson customise all the glue boards according to the needs of our clients. Our work is being made according to a model that we call *Demand Network System* – a network of specialists of various disciplines who work together to develop effective products. The demands of our clients guide the development, for the benefit of our clients and their customers. Our innovations can give them perfect solutions.
